Can you Catch the Water Activity – Catching Water Worksheet

Answer the following questions as you experiment with your catchment model:

- 1. *Prediction:* What will happen if it rains on your catchment basin model? Where will the water go? Will it go faster in some places? Why?
- 2. From where does the water that flows to your water collection site come?
- 3. What things on your landscape determine what will be part of your basin?
- 4. What things in your model determine the watershed?
- 5. How does the water flow? What things in your model determine the direction of water flow?

- 6. What happens if a dam is put into a stream that flows into your catchment basin?
- 7. What happens if a forest is placed above your catchment basin?
- 8. What happens if an industry that causes pollution moves into your basin?
- 9. What might happen if someone uses the water from your stream that flows into your catchment basin for irrigating his or her crops or to take away to another city?
