# Wind Power Activity - Power Math Worksheet 

$$
\begin{gathered}
P=\text { power, Watts }(W) \quad E=\text { energy, Joules }(J) \\
t=\text { time, seconds(s) }
\end{gathered}
$$

1. What is the power produced by a wind generator that produces 500 J of electrical energy in 2 seconds? (Use $\mathrm{P}=E \div t$ or $\mathrm{W}=\mathrm{J} \div \mathrm{s}$ )
2. How much electrical energy is produced in 3 seconds by a wind generator that has a power out of 1000 W ? (Use $\mathrm{E}=\mathrm{P} \times \mathrm{t}$ or $\mathrm{J}=\mathrm{W} \times \mathrm{s}$ )
3. A large wind generator has a power output of 5000 W . How long does it take to produce 500 J of electrical energy? (Use $\mathrm{t}=E \div P$ or $\mathrm{s}=\mathrm{J} \div \mathrm{W}$ )
