## GPS Worksheet - Answer Key

Where Are They? - Note: Distances may be off by $+/-0.5 \mathrm{~cm}$ to make the triangulation slightly more challenging.

| Name | Distance to <br> Satellite 1 <br> (cm) | Distance to <br> Satellite 2 <br> $(\mathrm{cm})$ | Distance to <br> Satellite 3 <br> $(\mathrm{cm})$ | Distance to <br> Satellite 4 <br> $(\mathrm{cm})$ | Which State? |
| :---: | :---: | :---: | :---: | :---: | :---: |
| YOU! | 12 | 18 | 9 | 15 | Colorado |

| George | 5 | 20 | 13 | 22 | Washington |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Patricia | 23 | 15 | 16 | 3 | Florida |
| Shawn | 12 | 14 | 13 | 15 | South Dakota |

| Isaac | 17 | 9 | 17 | 11 | Michigan |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Sarah | 21 | 7 | 20 | 11 | New York |
| Carla | 14 | 15 | 11 | 12 | Kansas |

| Oscar | 17 | 12 | 14 | 10 | Illinois |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Olivia | 19 | 11 | 15 | 8 | Kentucky |
| Lin | 9 | 23 | 9 | 21 | California |

Add more states (or other specific locations on the map) to the list:

|  | 17 | 18 | 8 | 11 | Texas |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 17.8 | 18.1 | 8.4 | 9.7 | Austin |
|  |  |  |  |  |  |

You can have students find any point on the map - just print out a map, measure, and record the distances ahead of time.

BONUS CONVERSION: The actual accuracy of typical commercial GPS receivers (with 4 satellites locked) is roughly 5 meters. On the scale of this map, that accuracy would correspond to 0.000025 cm .
$\sim 2.5 \mathrm{~cm}=500,000 \mathrm{~m}$ and $\mathrm{X} \mathrm{cm}=5 \mathrm{~m} . X=2.5 * 5 / 500,000$ or $2.5 / 100,000=0.000025 \sim$
To visualize this, look at a 1-millimeter division on your ruler and imagine that it is divided into 4000 more divisions.
