# Rock, Paper Scissors Probability Activity RPS Probability Worksheet 

The RPS (Rock Paper Scissor) robot has the ability to throw a rock, paper, or scissor after the touch sensor is pressed. Can you guess which will it be?!

## Directions

Make a tally of how many times a rock, paper, or scissor is thrown by the robot.

| Trial \# | Rock | Paper | Scissor |
| :---: | :---: | :---: | :---: |
| 1 |  |  |  |
| 2 |  |  |  |
| 3 |  |  |  |
| 4 |  |  |  |
| 5 |  |  |  |
| 6 |  |  |  |
| 7 |  |  |  |
| 8 |  |  |  |
| 9 |  |  |  |
| 10 |  |  |  |
| Total |  |  |  |

Notice that there are no patterns and you will NOT be able to guess whether the RPS robot will throw either a rock, paper, or scissor. This is because the robot randomly generates which one it will throw.

## Analysis

1. What is the probability that the RPS robot will shoot Rock? $\qquad$
2. What is the probability that the RPS robot will shoot Scissor? $\qquad$
3. What is the probability that the RPS robot will shoot Paper? $\qquad$
4. You are a risk engineer working for Firm Rock. There are other risk engineers that work for Firm Scissor and Firm Paper. A stadium needs to be built, so the stadium owner notifies all three firms. Using what you have learned on probability, please answer:

- What is the probability that Firm Rock will get the job? $\qquad$
- What is the probability that Firm Scissor will get the job? $\qquad$
- What is the probability that Firm Paper will get the job? $\qquad$
