Refractive Index Using Hollow Cell and Percent Light Transmission Measurement: Lab Worksheet

## Part 1. Refractive Index Using Hollow Cell

Table 1. Angle of refraction $\left(\theta_{2}\right)$ vs. changing angle of incidence $\left(\theta_{1}\right)$.

| $\boldsymbol{\theta}_{\mathbf{1}}$ | $\boldsymbol{\theta}_{2}$ | $\sin \boldsymbol{\theta}_{1}$ | $\boldsymbol{\operatorname { s i n } \boldsymbol { \theta } _ { \mathbf { 2 } }}$ |
| :---: | :---: | :---: | :---: |
| $\mathbf{0}^{\circ}$ |  |  |  |
| $5^{\circ}$ |  |  |  |
| $10^{\circ}$ |  |  |  |
| $15^{\circ}$ |  |  |  |
| $20^{\circ}$ |  |  |  |
| $25^{\circ}$ |  |  |  |
| $30^{\circ}$ |  |  |  |
| $35^{\circ}$ |  |  |  |
| $40^{\circ}$ |  |  |  |
| $45^{\circ}$ |  |  |  |
| $50^{\circ}$ |  |  |  |
|  |  |  |  |

## Plot Your Data

Plot your data in terms of $\sin \theta_{2}$ vs. $\sin \theta_{1}$. Label your graph. Determine the slope, which is your average refractive index. (Note: $\mathrm{n}_{\text {air }}=1.00$ )

Graph title:

X-axis label: $\qquad$

## Analysis Questions

1. What is the first and second medium?
2. What line shape does $\sin \theta_{2}$ vs. $\sin \theta_{1}$ create? Describe the line or the curve that you produce.
3. What is the average refractive index of your liquid?
4. At what angle did you start to observe total internal reflection?
5. What is the identity of your unknown liquid? Explain your answer.
6. If you change the configuration of your setup to that shown to the right, would there be any difference? Explain.

Part 2. Refractive Index Matching Using Percent Light Transmission Measurement

Table 2. Refractive index matching using \% light transmission of particles on two different liquids.

| Liquid | Light intensity (V) | $\% T=\frac{I}{I_{o}} x 100$ |
| :---: | :---: | :---: |
| W1 |  | With WATER ( $\mathrm{n}=1.33$ ): |
| W2 |  |  |
| G1 |  | With GLYCERIN ( $\mathrm{n}=1.47$ ) |
| G2 |  |  |

## Analysis Questions

1. What is most likely the refractive index of the glass tube? Explain your answer.
2. Verify your results using a lux meter as the detector. (See the setup to the right $\rightarrow$ ) A lux meter is a commercially available device used to determine light intensity.
Did you get the same results as with the LED-multimeter detector? Describe what you observed.

## Lab Reflection Questions

Write a paragraph answering the following questions. Your answer should have at least five sentences.

1. What is the purpose of this lab?
2. What are three things that you learned in this lab? (Write at least one sentence explaining each one.)
3. How does this lab connect to the real world?
