## Review

1.) Rewrite as an exponent:

$$
\log _{7} 49=2
$$

2.) Rewrite as a logarithm:

$$
2^{5}=32
$$

3.) Evaluate:

$$
\log _{5} 125
$$

## Properties of Logarithms

- The properties of logarithms can be derived from the properties of exponents.
- We use these properties to solve equations.

## Properties of Logarithms

Suppose $m$ and $n$ are positive numbers, $b$ is a positive number other than 1 , and $p$ is any real number. Then the following properties hold.

| Property | Definition | Example |
| :--- | :--- | :---: |
| Product | $\log _{b} m n=\log _{b} m+\log _{b} n$ | $\log _{3} 9 x=\log _{3} 9+\log _{3} x$ |
| Quotient | $\log _{b} \frac{m}{n}=\log _{b} m-\log _{b} n$ | $\log _{\frac{1}{4}} \frac{4}{5}=\log _{\frac{1}{4}} 4-\log _{\frac{1}{4}} 5$ |
| Power | $\log _{b} m^{p}=p \cdot \log _{b} m$ | $\log _{2} 8^{x}=x \cdot \log _{2} 8$ |
| Equality | lf <br> $m=n$. $\log _{b} m=\log _{b} n$, then | $\log _{8}(3 x-4)=\log _{8}(5 x+2)$ <br> $\mathrm{so}, 3 \mathrm{x}-4=5 \mathrm{x}+2$ |

## Example:

Solve each equation.

$$
\text { 1.) } \log _{8}(4 x+6)=\log _{8}(8 x-2)
$$

## Example:

Solve each equation.

$$
\text { 2.) } \log _{9} x+\log _{9}(x-2)=\log _{9} 3
$$

## Example:

Solve each equation.

$$
\text { 3.) } \log _{p} 64^{\frac{1}{3}}=\frac{1}{2}
$$

## Try:

Solve each equation.

$$
\text { 4.) } \log _{4}(2 x+11)=\log _{4}(5 x-4)
$$

## Try:

Solve each equation.

$$
\text { 5.) } \log _{11} x+\log _{11}(x+1)=\log _{11} 6
$$
