## End-of-Unit Test

Name: $\qquad$

1. Find the equation of the line parallel to $7 x-6 y=13$ that passes through the point $(-42,-51)$. Express your answer in Slope-Intercept Form. Show your work!
2. Find the equation of the line perpendicular to $3 x+8 y=-15$ that passes through $(-9,14)$. Express your answer in Point-Slope Form. Show your work!
3. Find the equation of the line parallel to the line $y=6$ that passes through $(-5,2)$.
4. Find the equation of the line perpendicular to the line $y=-1$ that passes though $(7,3)$.
5. Determine whether each of the relations below is a function and then, using proper set notation, state its domain and range.
(A) $\{(1,7),(2,5),(4,5),(6,6)\}$
(B) $\{($
), ( ,
), ( ,
$)\}(\mathrm{C})\{(2,8),(3,10),(2,5),(6,17)\}$

Domain:

Range:
6. $y$ varies directly as $x$. If $y$ is 30 when $x$ is $0.6, \ldots$

| (A) find the constant of direct <br> variation, $k$. Show some <br> work! | (B) write an equation of direct <br> variation in the form $y=k x$. | (C)find $y$ when $x$ is 20. Show <br> your work! <br>  |
| :--- | :--- | :--- |

7. Show your work as you find the slope of the line that passes through the following points:
(A) $(8,-13)$ and $(2,-6)$
(B) $(9,6)$ and $(-5,3)$
8. Determine whether each statement is true or false. Write the entire word, not simply "T" or "F".
$\qquad$ When read from left to right, a line with a positive slope will be decreasing.
$\qquad$ The slope of any horizontal line is zero.
$\qquad$ It is impossible for the slope of a line to be undefined.
$\qquad$ When read from left to right, the line $y=\frac{1}{3} x$ increases more quickly than the line $y=\frac{1}{2} x$.
9. Match each term with its correct formula.
$\qquad$ Slope-Intercept Form
(A) $y=b$
$\qquad$ Vertical Line
(B) $y-y_{0}=m\left(x-x_{0}\right)$
$\qquad$ Standard Form
(C) $x=a$
$\qquad$ Point-Slope Form
(D) $y=m x+b$
$\qquad$ Horizontal Line
(E) $A x+B y=C$
10. Write the equation of the line (in Slope-Intercept Form) that passes through the points $(8,-3)$ and $(16,4)$. Show your work!
11. Write the equation of the line (in Point-Slope Form) that passes through the points $(-4,-3)$ and $(-8,-9)$. Show your work!
12. Find the $x$ and $y$ intercepts of the line $-3 x+5 y=-60$. Show your work! You can express your final answer as either a single number or an ordered pair.
$x$ - intercept:
$y$ - intercept:
13. Convert the equation $y-8=-3(x+5)$ from Point-Slope Form to Slope-Intercept Form. Show your work!
14. Using the rectangular coordinate system below, graph each of the linear equations. Write each equation beside its corresponding graph.
$y=-5 x+7$
$2 x-4 y=16$
$y=-5$
$y-5=\frac{1}{6}(x+4)$
$x=8$
