Brought to you by

Objective

Students test their 3D print's ability to solve their problem.

Table of contents

01

Introductory Question

A reflection question.

02

Checking Out the Prints

How do they look?

03

Discussing the Prints

Let's talk about it.

04

Testing the Prints

Do they work?

01

Introductory Question

A reflection question.

Introductory Question

While I hand out your 3D-printed hooks, think about the following question:

What are the benefits of 3D printing? What else can it be used for?

What problems can it solve?

Discuss in your groups for **two minutes** and then we will discuss as a class.

02

Checking Out the Prints

How do they look?!

Additional Time and Checking it Out

Some of you may not have fully gotten to where you wanted to get with your 3D prints, so if you need some additional time to design, this is a good time to do that. Let me know if you need help. **The most important part is that you have a model created on OnShape.**

If you have a 3D print in front of you, take a look at it. Spend the next **five minutes** discussing:

Does it look as though you imagined it?

What improvements do you think you could make?

Are there any imperfections, things you noticed that you wanted to ask about?

01

03

Discussing the Prints

Let's talk about it.

Questions to Get You Thinking

Let's discuss your 3D prints as a class.

- Does it look as though you imagined it?
- What improvements do you think you could make?
- Are there any imperfections, things you noticed that you wanted to ask about?

01

Introductory Question

02

Checking Out the Prints

03

Discussing the Prints

04

Testing the Prints

04

Testing the Prints

Do they work?

Does It Work?

Can your 3D print solve the problem it was trying to solve? Can it be used to successfully hang your mass from the string? If not, think about what the next iteration might do differently.
