Machine Learning Checklist

Directions: As you work on your machine learning model, use this checklist to guide your steps.

- ☐ Gather and label data samples (e.g., glucose levels in various solutions).

- ☐ Upload labeled data to the Machine Learning for Kids platform.

- ☐ Train the model using the provided data.

- ☐ Ensure the model successfully identifies patterns and learns from the data.

- ☐ Test the trained model with new, unseen data samples.

- ☐ Check whether the model correctly predicts glucose levels in new solutions.

Was your machine learning model successful? Why or why not?

What further steps will you take?
