Day 6: Testing, Redesign, and Reflection Sheet

Group Members: _____

Testing Your Interface

Describe your process for testing your interface below. How do you know your interface is working as intended? Are any parts of the interface not working as intended? Are you surprised by any results?

Redesigning and Reprogramming

If there are parts of your interface that did not work as intended, how are you going to fix those (or how did you already fix those)? What parts of your interface may need to be redesigned? How might you change the code to ensure your interface works as intended?

Reflection

How do you feel about your interface and the engineering process as a whole? What could have been improved? What challenges or issues did you face? Is there anything you could have done better to prevent any issues you faced?
