

Dear Student Engineers,

We would like to start out by thanking you for participating in our design challenge. The aquaponics system we have at our site in Bolivia is up and running great, however we still need help establishing new systems in other communities in Bolivia. We are comfortable with our system pumps and beds, but would like to have more designs for our communities to use. In order for our communities to keep costs low and growing high we want our designs to use recycled materials. Once again thank you for your participation in our design challenge, we look forward to seeing what your brilliant minds imagine and build!

Sincerely,

Etta Projects
